Articolo CXL. Parametri verifica strutture esistenti

Le verifiche nel seguito sono effettuate secondo i requisiti previsti dal Decreto 14 gennaio 2008 per le strutture esistenti analizzate con:

Spettro di progetto con $q = 2.500000$ scalato a 1.5 per elementi fragili

Il fattore di confidenza adottato è $CF = 1.000000$

I valori di resistenza dei materiali sono opportunamente ridotti del fattore di confidenza

Articolo CXLI. Classificazione membrature

Vengono calcolati i tagli **V_{py}** e **V_{pz}** dovuti a fenomeni anelastici e i tagli ultimi **V_{uy}** e **V_{uz}**. Il minor fattore di sicurezza **F_s** tra i due valori nei due piani determina se l'elemento è **Duttile** o **Fragile**. Nel caso gli elementi siano rinforzati, viene riportata un **R** nella colonna omonima e le caratteristiche del rinforzo vengono riportate nella apposita tabella.

Articolo CL. Parametri verifica strutture esistenti

Le verifiche nel seguito sono effettuate secondo i requisiti previsti dal Decreto 14 gennaio 2008 per le strutture esistenti analizzate con:

Spettro di progetto con $q = 2.500000$ scalato a 1.5 per elementi fragili

Il fattore di confidenza adottato è $CF = 1.000000$

I valori di resistenza dei materiali sono opportunamente ridotti del fattore di confidenza

Articolo CLI. Caratteristiche materiale rinforzi

Materiale: FRP

Modulo elastico medio a trazione: 2100000.000000

Vengono calcolati i tagli Vpy e Vpz dovuti a fenomeni anelastici e i tagli ultimi Vuy e Vuz. Il minor fattore di sicurezza Fs tra i due valori nei due piani determina se l'elemento è Duttile o Fragile. Nel caso gli elementi siano rinforzati, viene riportata un R nella colonna omonima e le caratteristiche del rinforzo vengono riportate nella apposita tabella.

Per ogni elemento **Elem** dotato di rinforzo, viene riportato il rinforzo **Longitudinale** e **Trasversale** presente, sinteticamente, all'estremo a **Sinistra**, **Destra** oppure al **Centro**. Viene riportato lo **Spessore** totale secco dello strato. Viene riportata la **Forma** della disposizione. Nel caso di rinforzo trasversale, vengono riportati **Passo** e **Larghezza** di fascia. Se non riportati, indicano un rinforzo continuo. Nel caso di rinforzo longitudinale, questi campi non sono utilizzati. Vengono infine riportati la tensione di rottura **Kf**, i fattori di conversione ambientale **Env** e di modalità di carico **Lod** e il raggio di arrotondamento **Rnd** degli spigoli.

820 Pannello di nodo per taglio	0.80	=	=	9200.00

Per ogni nodo sovrastante il pilastro di indice **Elem** vengono riportati i dati per rinforzo a taglio e/o con fascia sul piastrino per contrastare l'azione della tamponatura. Si riporta lo spessore **Tk** secco del pannello di nodo in materiale quadrassiale, per il rinforzo per la tamponatura si riporta anche la larghezza **Wd** della fascia e lo spessore **TTk** della tamponatura. Viene riportata la tensione di rottura delle fibre **e**, nel caso del rinforzo per la tamponatura, anche la resistenza a compressione **Km** e a taglio **Vm** della tamponatura.

Minimo fattore di sicurezza: 1.143615 >= 1.00

Se presenti i rinforzi, sono riportate le verifiche per due meccanismi: rinforzo a taglio del nodo e rinforzo per l'azione della tamponatura. Nel caso della tamponatura, **Vd** è la componente orizzontale della forza esercitata dalla tamponatura. La fascia sul pilastro che determina il taglio resistente **Vr** si intende disposta a 30°. Nel caso del Pannello invece **Vd** e **Vr** sono il taglio agente e quello resistente. Vengono riportati solo i dati dei nodi non confinati
